

# Proposal for Emoji: Up Switch and Down Switch

Submitter: Morris Kolman & Alexander Petros

Date: Jul 29, 2024

## I. Identification

Proposed Unicode and CLR name	Possible CLDR English Keywords	Category	Closest Unicode Emoji
Up Switch	Switch, On, Up, Active	Computer	🔼⏫▶💡
Down Switch	Switch, Off, Down, Inactive	Computer	🔽⏬✖🚫▬◻️✖

## II. Images

Up Switch

Down Switch

**License:** These images are the original work of the submitters and are certified to have the appropriate licenses for use by the UTC.

## III. Sort Location

**Category:** Computer

**Append Location:** After plug, and before computer

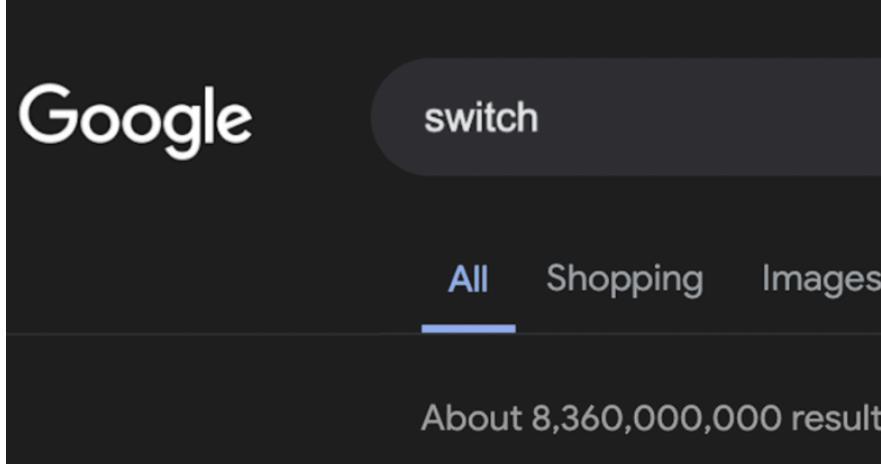

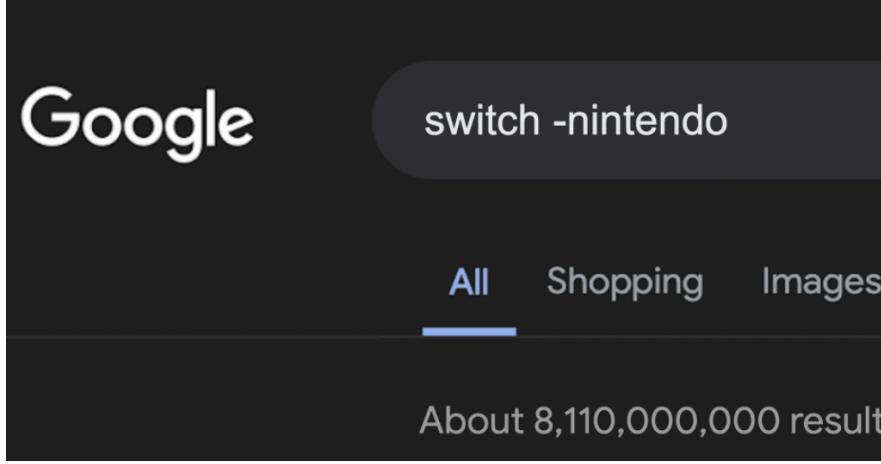

## IV. Selection Factors - Inclusion

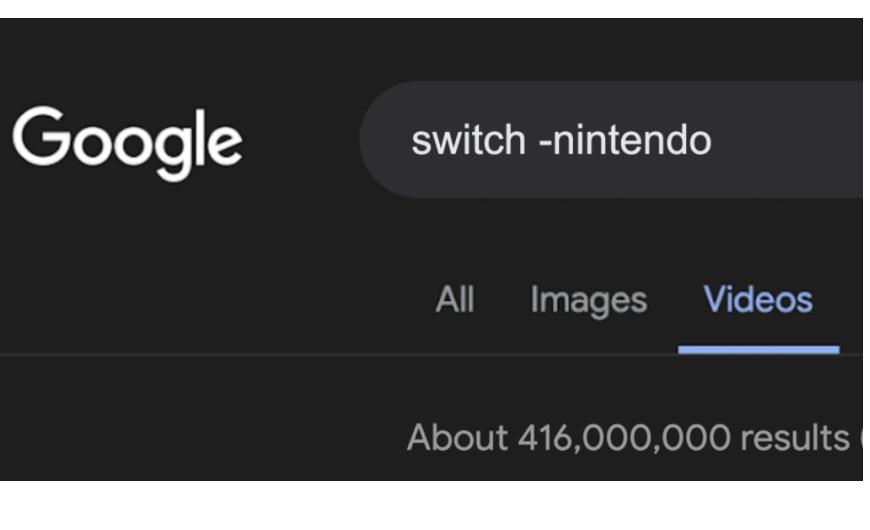

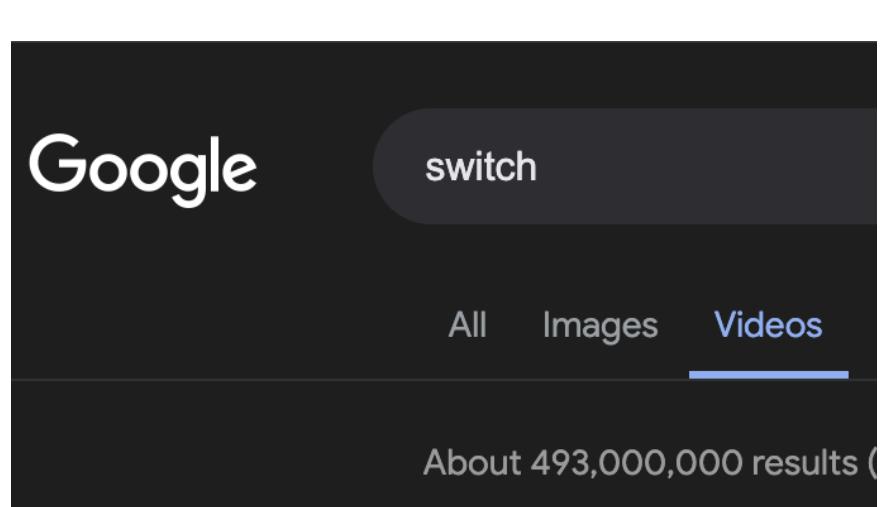

a. Compatibility: N/A

b. Expected Usage Level:

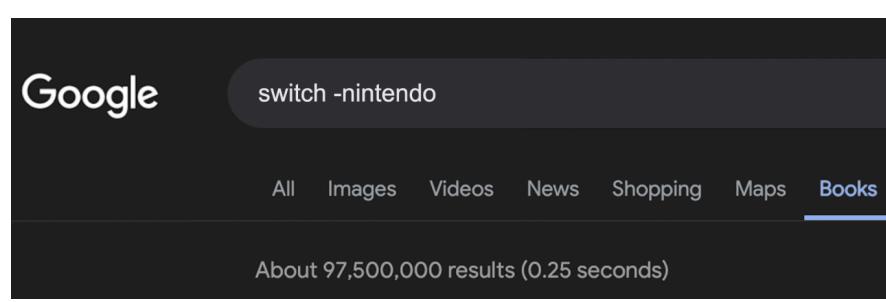

1. Frequency for “switch”

Search Tool	Result (removing nintendo switch for clarity where possible)
Google Web	 A screenshot of a Google search results page. The search bar at the top contains the query "switch". Below the search bar, there are three tabs: "All" (which is selected), "Shopping", and "Images". At the bottom of the page, the text "About 8,360,000,000 result" is displayed.
	 A screenshot of a Google search results page. The search bar at the top contains the query "switch -nintendo". Below the search bar, there are three tabs: "All" (which is selected), "Shopping", and "Images". At the bottom of the page, the text "About 8,110,000,000 result" is displayed.

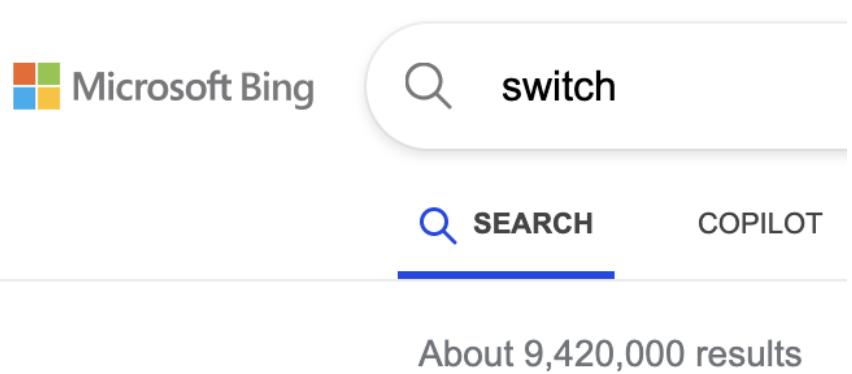

Google Videos

Google Books

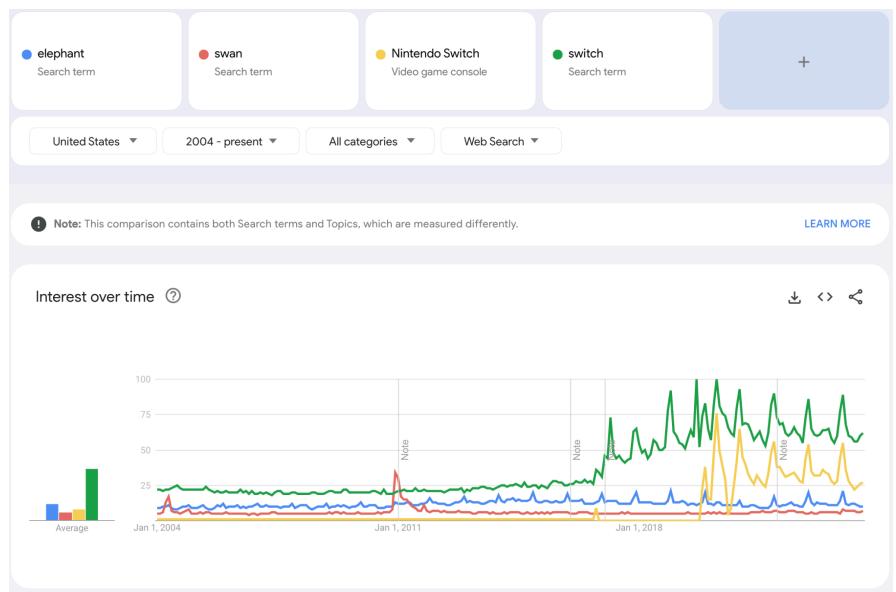

## Bing Search

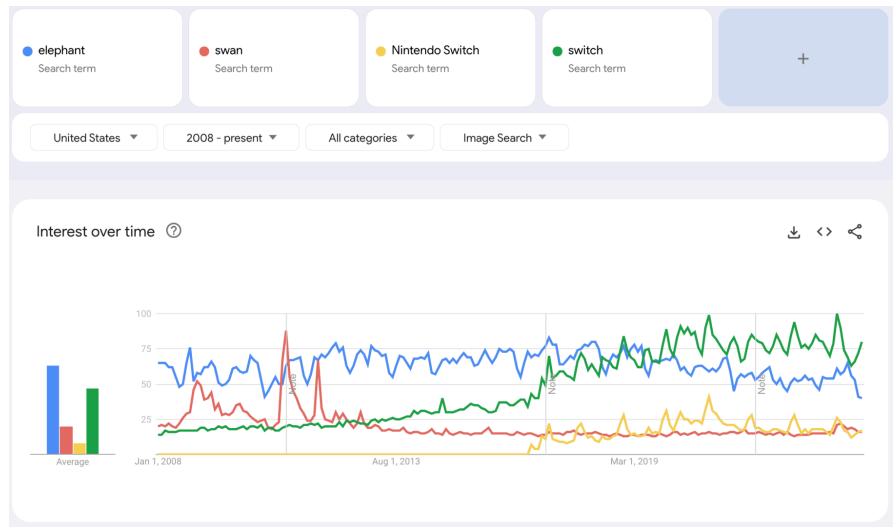

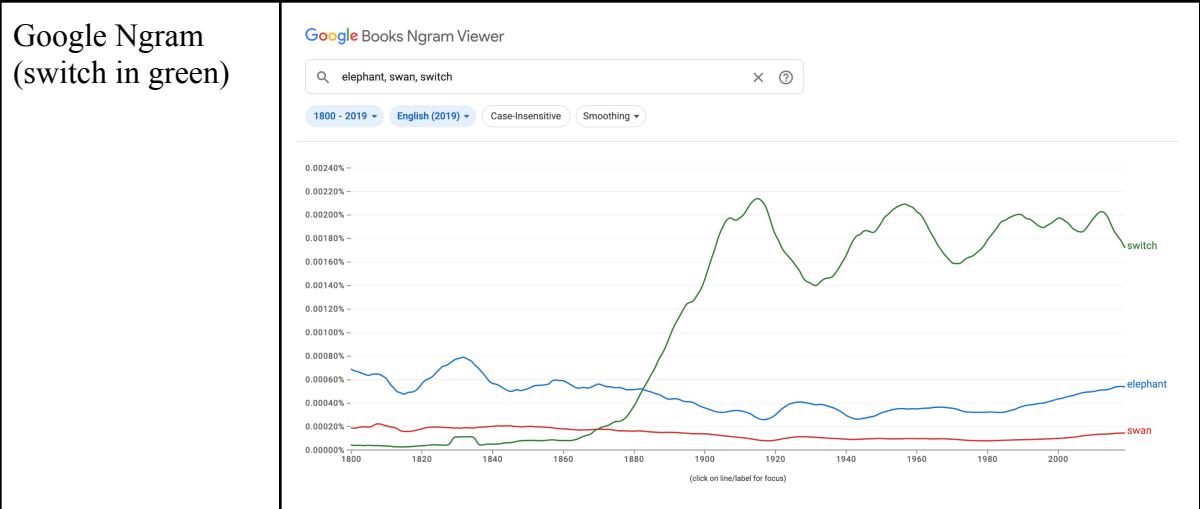

The Bing search interface shows the search term "switch" entered into the search bar. Below the search bar are two buttons: "SEARCH" and "COPilot". A message at the bottom indicates there are "About 9,420,000 results".

## Google Trends Web (switch in green)

## Google Trends Images (switch in green)

## 2. Use in Sequences

- “turn off the lights and the TV”
- “Surprise Party”
- “Have you tried turning it off and turning it back on again?”
- “It’s bedtime, I’m powering down for the day”
- “Indecision”
- “Vacation time”
- “Code switching”

## 3. Multiple Usages

- **On/Off:** Digital devices, household appliances and many everyday items have “off” and “on” states that people switch between
- **Activating/Deactivating:** Switching on can be used metaphorically to mean focusing on a task, or entering a state of additional capability

- **Binary state:** Because the switch can only be up or down, it can be used to represent any sort of binary information
- **Recent changes:** The switch can imply not just the possibility of change, but that a change was recently made i.e “switching sides”
- **Lever:** The switch can be used to signify pulling a lever, a simple machine with wide presentation in culture

#### 4. Breaking New Ground: Yes

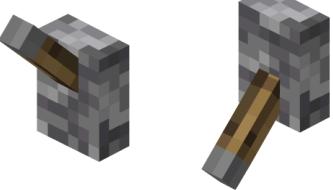

The current emoji set cannot express the concept of turning things “on” and “off.” There are various up  and down  arrows, but these are included in arrow sets that can also go in other directions, which does not communicate the same binary choice, nor do they have any association with powered devices. There are play , pause , and stop  buttons, but these are also not binary and not nearly as expressive: one does not “stop” the lights or “play” the A/C.

Even expressing these concepts individually is a challenge. The existing ways to express “off” are highly specific, like “mobile phone off”  or “sound off” , and therefore cannot be easily combined with other emoji to establish new contexts or meanings. And almost no emojis even approximate “on.” The various devices that one might turn on do not have corresponding “on” and “off” versions—there is only one lightbulb , for instance, and it is typically rendered lit.

#### c. Distinctiveness

As a pair, the up and down switches are recognizable symbols of state change, especially dramatic or binary ones.

Visually, nothing in the existing emoji looks like a switch. The other “off” emojis typically use abstract representations of prohibition, like the color red or strikethroughs, to symbolize that something is not happening. There are also no physical items that resemble a switch, like a lever.

	A switch in Minecraft, the single most popular game in the world (>300M copies).
---	--

	<p>Dr. Ellie Sattler (Laura Dern) flips a switch to return power to Jurassic Park.</p>
	<p>Kronk pulls the wrong lever in “The Emperor’s New Groove,” activating a trap door.</p>
	<p>A character reveals an “evil / good” switch on a Krusty the Clown figurine in The Simpsons</p>

#### d. Completeness

The up and down switches are themselves a complete pair, representing the only two states of a switch, but they also complete an expressivity gap that is unique to electronic devices.

Some related categories of emoji can express an “engaged” or “disengaged” state (🔒/🔓, 📺/📺, 📸/📸). While it would be not be feasible to add on and off states for every electronic device (📺, 💻, 📱, 🚖, 💡, etc.), adding the switches instantly makes it possible to express that with the entire existing set of devices.

## IV. Selection Factors - Exclusion

- e. **Petitions or “Frequent Requests”:** No such petitions exist.
- f. **Overly Specific:** No, switches are a universal mechanism for myriad devices, tools, and machinery.
- g. **Open-ended:** No, there are only two possible switch states.
- h. **Already represented:** No.
- i. **Logos, brands, other third-party IP, UI icons, signage, specific people, specific building and landmarks, deities:** No.

- j. **Transient:** No, electrical switches have been around for over 100 years and remain ubiquitous; the lever has existed for millenia.
- k. **Faulty Comparison:** No, the proposal is not justified by existing emoji.
- l. **Exact images:** N/A
- m. **Region Flags Without Codes:** N/A
- n. **Lack of Required Rights or License for Images:** N/A
- o. **Variation on Direction:** N/A
- p. **Includes Text:** N/A

## IV. Other information

### **Regional differences:**

In the US, Canada, Russia, and many European Countries, the up switch is used to turn things on, while in the UK and many Commonwealth Countries the reverse is true. This could be handled in two ways: either the emojis represent “on” and “off” keywords switches and get their keywords regionalized in the appropriate orientation, or the emojis simply represent “up” and “down” switches, and one relies on shared cultural context to interpret them.

We propose the latter. Anecdotally, visual differences in the depiction of emojis seem to cause more surprise than cultural differences. Using up/down instead of on/off moves the communication burden from a technical problem (US English vs UK English in the phone settings) to a social problem (“I am texting my UK friend, where the switches are different”), which we suspect users prefer. It is also probably better to promise less in the official description—up/down will always be accurate—and allow users to fill in the higher-order concepts, like on and off, contextually. This is already the case for other emojis whose interpretation can differ across cultural contexts, such as the assorted hand signs.

Of course, we defer to the localization experts at the Unicode Foundation on the best way to approach this challenge, and merely flag it here for reference.
